EDUCATION

Mahidol University

Bachelor of Engineering Program in Computer Engineering

Aug 2024 – May 2028

GPA: 3.90

EXPERIENCE

Western Digital, Internship

Jun 2026 – Aug 2026

Manufacturing Engineer(Machine Learning / Computer Vision), AVI Vision Enhancement

- Built a YOLO instance segmentation pipeline for an Automated Visual Inspection (AVI) system on a live Genesis production line, targeting false-reject reduction in the ML re-inspection workflow.
- Constructed a labeled defect dataset by hand-annotating 1,500+ production images across 6 defect classes using open-source annotation tooling. established labeling documentation standards to ensure annotation consistency and enable dataset expansion.
- Reduced image preprocessing time from 1 hour to 3 minutes (20x) by implementing multithreaded crop extraction and migrating training workloads to a GPU server, accelerating experiment iteration cycles.
- Designed a production deployment architecture pairing a Rust orchestration layer (I/O, config, operator UI) with a persistent Python ML microservice over gRPC for Windows line-PC deployment.

Head of Sponsorship Coordinator, ClickCamp16

May 2025 – Dec 2025

Mahidol Computer Engineering

- Led sponsorship strategy and relationship management for a university computing camp; secured 130,000 THB in funding.
- Contacted 200+ companies and built structured outreach-tracking workflows to manage the full sponsorship pipeline.

Piscine 42 Bangkok School

May 2024 – Jun 2024

42 School, KMITL

- Completed the intensive one-month selection program, shipping peer-evaluated C projects under strict deadlines with no formal instruction.
- Core topics: C programming, UNIX & shell, Git & version control.

PROJECTS

Banana Ripeness Classification | ResNet34, PyTorch, scikit-learn

- Built a proprietary dataset from scratch by photographing bananas daily over 3+ months across their full ripeness lifecycle, capturing natural progression from fresh to rotten under real conditions.
- Iterated on class taxonomy through multiple relabeling experiments, testing different ripeness stage boundaries to maximize inter-class separability, improving F1-score to 87.5%.
- Fine-tuned a ResNet34 via transfer learning with learning-rate scheduling for agricultural quality assessment.

HR ChatBot | n8n selfhost, Docker, Supabase (PostgreSQL), LLM, RAG

- Developed a cross-platform chatbot to automate HR workflows such as leave requests and benefit inquiries through the LINE Messaging API.
- Built a RAG pipeline over HR policy documents with LLM-based intent extraction, handling 5 intent categories end-to-end.

TECHNICAL SKILLS

Languages: Python, C, C++, Java, SQL, Rust, HTML/CSS

ML / CV: PyTorch, Ultralytics YOLO, OpenCV, scikit-learn, Pandas, NumPy

Systems & Tools: Docker, Git/GitHub, gRPC, FastAPI, Linux, Supabase, Vercel, n8n, MATLAB

AWARDS

2nd Place Winner, Super AI Engineer SS5 (AI Innovator Track, Western Region) Summer 2025

Participant, Invent for the Planet Hackathon, INT Mahidol

Feb 2025

Gold Medal, Onsite Presentation, Data Science Project Contest 2023, CMU

Sep 2023
