Education

Mahidol University Aug 2024 – Present
Bachelor of Engineering Program in Computer Engineering *GPA: 3.90*

Experience

Western Digital, Internship Jun 2026 – Aug 2026
Manufacturing Engineer (Machine Learning / Computer Vision), AVI Vision Enhancement

- Built a YOLOv8 instance segmentation pipeline for automated visual inspection across 6 defect classes, achieving 45.3% mask mAP@50 on 142 held-out test images and GPU inference at 7.7 ms/image.
- Constructed a labeled defect dataset by hand-annotating 1,500+ production images across 6 defect classes using open-source annotation tooling. Established labeling documentation standards to ensure annotation consistency and enable dataset expansion.
- Communicated project progress, experimental results, and technical challenges to the engineering mentor and manager through weekly reports and discussions.

Head of Sponsorship Coordination, ClickCamp16 Core Team May 2025 – Dec 2025
Mahidol Engineering, Computer Engineering Department

- Led sponsorship strategy and relationship management, secured 130,000 THB in funding.
- Contacted 200+ companies and built structured outreach-tracking workflows to manage the full sponsorship pipeline.

Piscine, 42 Bangkok School May 2024 – Jun 2024
42 School, KMITL

- Completed the intensive one-month selection program
- Core topics: C programming, UNIX and shell, Git and version control.

Selected Projects

NYC Taxi Data Platform | PostgreSQL, dbt, Apache Airflow, Streamlit

- Built an ELT pipeline processing 7.05 million taxi records, retaining monthly history with transactional reloads that prevent duplicate ingestion.
- Developed dbt staging and daily analytics models with five automated data tests, including required-field checks, date uniqueness, and daily row-count reconciliation.
- Orchestrated parameterized ingestion and transformation workflows using Apache Airflow, with task dependencies and retry handling and containerized the pipeline using Docker Compose.

FahMai Thai RAG, Hackathon Prototype | RAG, BM25, Typhoon LLM

- Built a retrieval-augmented question-answering pipeline over a Markdown knowledge base, splitting documents into searchable chunks with source and category metadata.
- Implemented hybrid retrieval using multilingual sentence embeddings with cosine similarity and BM25, combining rankings with reciprocal-rank fusion, scoring 0.90 on the public leaderboard

HR Chatbot | n8n Orchestration(Self-hosted), AI AGENT, Supabase(PostgreSQL)

- Integrated the LINE Messaging API with an n8n POST webhook endpoint, containerizing the local environment with Docker Compose and configuring ngrok HTTPS tunneling for webhook testing.
- Built a RAG pipeline over HR policy documents with LLM-based intent extraction, handling multiple intent categories end-to-end.

Skills

Languages: Python, C, C++, Java, SQL, Rust, HTML / CSS
ML / CV: Ultralytics YOLO, OpenCV, scikit-learn, PyTorch, Pandas, NumPy
LLM: RAG, LangChain, VectorDatabase
Data Engineering: ETL & ELT, Data Mining, Data Pipelines, Data Quality
Systems & Tools: Docker, Git, GitHub Actions (CI/CD), FastAPI, Linux, Supabase, Vercel, n8n
English: TOEIC 865 / 990 (CEFR B2)

Awards

2nd Place, Super AI Engineer SS5 (AI Innovator Track, Western Region) Summer 2025

- Project: PracticeAI Organized By Artificial Intelligence Association of Thailand (AIAT)
