PROFILE

Computer Engineering student driven by curiosity, mastery, and clarity. Enjoys solving problems, learning deeply, connecting ideas across disciplines, and turning complexity into structure. Long-term goal is to build meaningful systems that create real-world impact.

EDUCATION

Mahidol University <i>Bachelor of Engineering Program in Computer Engineering</i>	Aug 2024 – May 2028 GPA: 3.96
Suksanareewittaya School <i>High School, Computer STEM Program</i>	May 2021 – Mar 2024 GPA: 4.00

TECHNICAL SKILLS

Languages & Databases: Python, C, C++, Java, SQL, HTML/CSS
Tools: Git, GitHub, Supabase, Vercel, Google Colab, VS Code, spreadsheets, MATLAB, n8n, Docker
Libraries & Frameworks: Pandas, NumPy, Matplotlib, Seaborn, PyTorch, scikit-learn
English: MU-ELT 113/150

PROJECTS

HR ChatBot | n8n selfhost, Docker, Supabase (PostgreSQL), LLM, RAG

- Developed a cross-platform chatbot to automate HR workflows such as leave requests and benefit inquiries through the LINE Messaging API.
- Integrated LLM capabilities to improve natural-language intent extraction accuracy.

Banana Ripeness Classification | ResNet34, Fastai, PyTorch, scikit-learn

- Built a deep learning image classification model to identify banana varieties and ripeness stages, achieving an F1-score of 87.5% on the test set.
- Improved model performance through transfer learning and learning-rate scheduling, reducing manual inspection time for agricultural quality assessment.

Bangkok Public Transportation Passenger Insights | Pandas, NumPy, SciPy, Plotly, Seaborn, Matplotlib

- Analyzed 14 months of multi-modal transit data across BTS, MRT, ARL, and Red Line services to identify passenger growth trends, market share shifts, and service stability.
- Developed a Z-score anomaly detection model to correlate passenger-volume fluctuations with 35+ Thai holidays and events.

Space Fighter | Java, Swing, OOP, Multithreading, Event-Driven Programming

- Built a desktop arcade shooting game with player controls, automatic shooting, asteroid collision detection, upgrade mechanics, difficulty levels, and sound settings.
- Applied object-oriented design and concurrent programming by separating game entities into classes and using threads to manage asteroid spawning, bullet movement, and real-time gameplay.

Security Check System | KidBright Micro AI Platform, Sensors, Image Classification

- Designed and implemented a security check system using sensors and an image classification model during the Talent Robotics, AI and Coding program.

LEADERSHIP & PROGRAMS

Head of Sponsorship Coordinator, ClickCamp16 <i>Mahidol Computer Engineering</i>	May 2025 – Dec 2025
--	---------------------

- Led sponsorship coordination and relationship management for the event.
- Contacted more than 200 companies and applied structured data-management workflows to outreach.
- Secured 130,000 THB in funding.

42 School, KMITL

- Completed the one-month selection program at 42.
- Trained 70–100 hours per week, developing autonomy, adaptability, and collaboration while building projects under real deadlines.
- Relevant coursework: UNIX & Shell, Git & Version Control, C Programming.

Talent Robotics, AI and Coding (Talent RAC)

Oct 2023

AI Track, Sirindhorn Science Home

- Joined a program by IPST and NECTEC focused on robotics, AI, and coding through online and onsite training plus hands-on projects.
- Completed onsite training in AI applications, 3D design, and IoT.

AWARDS & ACTIVITIES

2nd Place Winner, Super AI Engineer SS5 (AI Innovator Track, Western Region)	Summer 2025
Gold Medal, Onsite Presentation, Data Science Project Contest 2023, CMU	Sep 2023
Construction of school facilities, 16th Jitasa Camp, Mahidol Engineering Volunteer Club	Dec 2025
Staff Group Leader, CTFriends2, Mahidol Engineering Cybersecurity Club	Apr 2025
Staff Tickets Seller, INCRISIS Concert, Mahidol Engineering Student Association	Apr 2025
Staff Entertainment & Group Leader, ClickCamp15, Mahidol Computer Engineering	Dec 2024
Participant, Invent for the Planet Hackathon, INT Mahidol	Feb 2025
